Reconciliation Service API

Reconciliation service test bench

[Source repository](#)

Services **Test bench**

This table lists reconciliation services known to [Wikidata](#) and indicates which features of the [reconciliation API](#) they support. See also our [census](#) which lists client and server software that use the API.

If you are viewing this app over HTTPS it is likely that reconciliation services using HTTP are blocked as "mixed content". You can disable this protection in your browser to load HTTP reconciliation services.

Due to [a security risk inherent to JSONP](#), only endpoints supporting [CORS](#) are loaded by default. You can click the 🔍 button in each row to attempt to load the service via [JSONP](#). Note that a malicious endpoint could use JSONP to execute arbitrary JavaScript code in this page. If you trust all the reconciliation services listed here, you can also [load all endpoints via JSONP](#).
